

Ten First Screens

Ten radically different answers to the same question: what greets you when the app opens on Day 84? Every concept runs on the live numbers from today — 154.5 lb, 33 days to goal, 746 kcal/day pace — and every chart is full-bleed. No cards anywhere.

PROGRESSIVE DISCLOSURE OVER DASHBOARDS

FULL-BLEED CHARTS — NO CARDS

ONE HERO PER SCREEN

01 The Answer — Progressive disclosure, taken all the way

03 Mission Clock — T-minus 33

05 The Budget — Deficit is the leading indicator

07 The Coach — Open to a conversation

09 This Week — Nothing exists beyond Sunday

02 Chart Immersion — The chart is the app

04 The Journal — A weigh-in, not a dashboard

06 The Journey — 63% of the way there

08 Horizon — Your cut, as a landscape

10 The Instrument — Brutalist telemetry

FIG. 00

THE BASELINE — WHAT SHIPS TODAY

FIG. 01

THE ANSWER

The Answer

Progressive disclosure, taken all the way

THE IDEA

The screen answers the only question a daily check-in really asks — am I on track? — with two words and a sparkline. Every number you know today is still there, just stacked one tap deep instead of shouting at once.

WHY IT'S INTERESTING

- Turns the app from a dashboard into a daily verdict: opening it takes under a second of reading.
- The off-track state ("Slipping.", amber) lands emotionally precisely because the screen is usually this quiet.
- The four depth dots teach the drill-down path without a tutorial.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Tap the verdict → peel to trend → deficit → projection; swipe right to step back out.
- Long-press the sparkline to scrub any day's weight.
- The wording adapts to reality: "On track." / "Holding." / "Slipping."

SHOWN — verdict · weight · week delta · sparkline. HIDDEN — deficit, pace, projection, countdown (1–3 taps deep).

FIG. 02

CHART IMMERSION

Chart Immersion

The chart is the app

THE IDEA

No chrome, no containers: the 30-day curve fills every pixel of the display, with the goal line and projection drawn straight onto the canvas. Weight, windows and scrubbing float on top as gestures and overlays.

WHY IT'S INTERESTING

- Maximum data-ink: the curve you generated becomes the brand of the app.
- Edge-to-edge makes 162→150 feel like terrain you are walking, not a report you are reading.
- Status bar, numbers and window tabs all float — nothing steals a single pixel of height from the data.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Swipe horizontally: 7D → 30D → all-time; the curve re-scales with a spring.
- Hold and drag to scrub any day; the floating number becomes that day's value.
- Pinch to zoom the y-axis around your current weight.

SHOWN — curve, raw dots, projection, goal line, weight, week delta. HIDDEN — all kcal math (behind a tap on the number).

○ #ffffff ● #111111 ● #16a34a

FIG. 03

Mission Clock

T-minus 33

THE IDEA

A dark HUD that treats the cut as a countdown mission: days-to-target is the hero, weight is demoted to telemetry, and a phosphor ring tracks percent complete. The chart survives only as a full-bleed strip along the bottom edge.

WHY IT'S INTERESTING

- Countdown reframing: "33 days left" is a far stronger daily hook than "154.5 lb".
- Black + phosphor green makes the app feel like a cockpit instrument, not a spreadsheet.
- Monospace telemetry rows are dense yet silent — information without a single card.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Tap the ring to cycle the countdown: days → pounds → kcal remaining.
- Double-tap any telemetry row to expand its history full-screen.
- After 9pm the whole HUD red-shifts to protect the night.

SHOWN — countdown, ring %, weight/avg/rate/proj rows, strip chart. HIDDEN — history, goal editing, notes.

● #050807 ● #35ff7a ● #0f2417

FIG. 04

THE JOURNAL

The Journal

A weigh-in, not a dashboard

THE IDEA

Paper-calm editorial screen: the date, one serif numeral, and a single written sentence about your week. There is no chart at all until you lift the page — the numbers are recorded, not displayed.

WHY IT'S INTERESTING

- Removes chart anxiety from the daily ritual; it reads like a note from a coach, not a terminal.
- One written sentence ("four days ahead of schedule") communicates more than four stat blocks.
- Serif numerals give the number gravity — a journal entry, not a widget.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Lift the bottom edge → the full-bleed chart slides up like a folded page.
- Tap the sentence to expand it into the full weekly summary.
- Swipe left to leaf back through past days, journal-style.

SHOWN — date, weight, one sentence. HIDDEN — literally everything else (one gesture away).

FIG. 05

THE BUDGET

The Budget

Deficit is the leading indicator

THE IDEA

Weight is a lagging signal, so this screen demotes it to the corner and heroes the thing you actually control today: your calorie budget against pace, drawn as an amber ring over a night-navy field, with the 14-day deficit history bleeding off the bottom edge.

WHY IT'S INTERESTING

- Behavioral: you can't act on 154.5 — you can act on 746 kcal. The screen points at the lever.
- Ring + full-bleed history makes day-to-day consistency visible at a glance.
- Navy/amber fits when weigh-ins actually happen: early morning and late evening.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Tap the ring to swap heroes: budget ↔ weight (for the days you want the classic).
- Swipe the history strip sideways to scroll back through weeks.
- Miss a day and the ring doesn't scold — it quietly re-budgets tomorrow.

SHOWN — today's kcal vs target, pace note, 14-day deficit area. HIDDEN — totals, projections, goal math.

● #0b1120 ● #f5a623 ● #aeb9cf

FIG. 06

THE JOURNEY

The Journey

63% of the way there

THE IDEA

A full-bleed dawn gradient with a single vertical timeline from Day 1 to Aug 21. You are a glowing point on it, and the only numeral on screen is how far you have come — not how far is left.

WHY IT'S INTERESTING

- Narrative framing: celebrates distance traveled instead of obsessing over what remains.
- The gradient literally lightens toward the goal — the app has a horizon.
- Almost nothing to read; it is a screen you feel rather than parse.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Drag along the timeline to revisit any day's weight and note.
- Tap the flag to edit date or target; the sky re-mixes around the new plan.
- Tap "63%" to flip perspective to "37% to go" — half-full or half-empty, your pick.

SHOWN — % complete, day markers, goal flag. HIDDEN — chart, kcal, projections (all in the timeline).

● #171c47 ● #b0517b ● #f0a05a

FIG. 07

THE COACH

The Coach

Open to a conversation

THE IDEA

The first screen is one message from your coach about today, with quick replies and a hold-to-talk button. Stats shrink to a single glance line — everything else is a question away.

WHY IT'S INTERESTING

- Sells the app's voice: it notices ("four days ahead") before you ask anything.
- Conversation is the ultimate progressive disclosure — any depth is one question down.
- Pairs naturally with the existing mic; logging becomes talking, not typing.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Tap a chip ("Today's targets") to continue the thread; history scrolls up.
- Touch the glance line and it expands into the classic stat sheet.
- The message is generated from your data every morning — never a generic greeting.

SHOWN — one insight, glance line, mic. HIDDEN — everything, one question away.

● #f6f4ff ● #6d4aff ● #221c47

FIG. 08

HORIZON

Horizon

Your cut, as a landscape

THE IDEA

An ambient sunrise: the sky lightens as you progress, the sun sits at your percent-complete, and the terrain beneath it is your actual weight curve — with a flag planted at 150. Glanceable art that repaints itself every morning.

WHY IT'S INTERESTING

- Zero reading required — the sun's position is the progress bar.
- The terrain is the real data silhouette: beautiful, and it cannot lie.
- Makes the daily open a moment instead of a chore; people will screenshot this.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Tap the sun to reveal exact numbers in a thin overlay; tap anywhere to dismiss.
- Drag across the ridge to walk back through any day.
- The sky's palette shifts with the actual time of your weigh-in.

SHOWN — sun position (%), terrain (curve), goal flag. HIDDEN — every numeral (one tap).

● #0a1c38 ● #e8784a ● #f7c46a

FIG. 09

This Week

Nothing exists beyond Sunday

THE IDEA

Radical time-boxing: the screen shows only the last seven days as full-bleed bars and the week's delta as the hero. No goal date, no projection, no 52,685 — just the week you can still influence.

WHY IT'S INTERESTING

- Kills goal-anxiety: Aug 21 is invisible until you deliberately choose the Progress tab.
- The weekly delta (-1.4) is the most honest single number in a cut — noise-cancelling by design.
- Full-bleed bars make daily weigh-ins read as steps, not scatter.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Swipe right to walk back week by week; the hero number re-computes per week.
- Tap any bar for that day's note and weigh-in time.
- Pull down to peek at the goal — it snaps back out of sight when released.

SHOWN — 7 daily bars, week delta, today's weight. HIDDEN — goal, pace, totals, projections.

○ #ffffff ● #1f6bff ○ #e8edf6

FIG. 10

THE INSTRUMENT

The Instrument

Brutalist telemetry

THE IDEA

A lab instrument: monospace tabular numbers, 2px rules, red ink, and a raw unsmoothed step-chart bleeding off the bottom. No rounding to friendly, no smoothing to pretty — the sheet shows exactly what the sensor said.

WHY IT'S INTERESTING

- Trust through honesty: raw dots and 154.500 signal that nothing is being hidden or flattered.
- A distinctive anti-design look that reads instantly in bright gym sunlight.
- Dense but perfectly flat — everything on one sheet, zero cards, zero nesting.

PROGRESSIVE DISCLOSURE & INTERACTIONS

- Tap any row to expand its full history full-screen.
- Toggle RAW / TREND to switch the chart between raw dots and the smoothed line.
- Triple-tap exports the day as CSV. Obviously.

SHOWN — everything, but raw and flat. HIDDEN — nothing; density is the point.
